Scalability and Future Plan

Project Demonstration

Project: Global Fuel Prices and Taxation Trends | Prepared: 25 October 2026 | Owner: Rudraraj Singh Bhati

No.	Current limitation	Impact	Priority
1	CSV source is a local file connection; source refresh process is manual.	Updated records may not appear until the data is refreshed and Tableau content republished.	High
2	Tableau Public views are public by design.	Do not publish confidential or restricted data.	High
3	Student-scale test is based on one browser session.	Timing measurements may differ by device, network, and concurrent viewers.	Medium

Scalability plan

Aspect	Current state	Proposed upgrade
User load	Public Tableau hosting with an embedded view.	Monitor performance; use an approved managed Tableau/hosting tier if access control or larger traffic is required.
Data storage	CSV file connected to Tableau.	Use a governed database/warehouse only if the project requirements and permissions justify it.
Performance	Observed 5 s initial, 4 s single-filter and 5 s two-filter update.	Repeat tests after refresh; simplify heavy worksheets and optimize extract/data source if needed.
Security	Public dashboard and Story.	Keep public data only; remove any sensitive fields before publication.

Future roadmap

Phase	Enhancement	Target timing	Expected impact
Phase 2	Confirm and document original dataset source URL; automate repeatable data validation.	Future iteration	Improved reproducibility and provenance.
Phase 3	Add scheduled data refresh and a documented versioning process.	Future iteration	Clearer data freshness and easier maintenance.
Phase 4	Evaluate additional business context and formal user feedback.	Future iteration	More defensible interpretation and more usable analysis.
